}
```

Open your project using any page as the URL, such as the homepage for your website.

Go to the "Settings" menu in the project.

Paste JSON from Mr. Data Converter into the "Starting Value" textbox, you can format it as follows:

- The list name "urls" can be renamed to anything you want such as "links" or something more descriptive like "shoes" or "brands".
- You can enter as many links in the structure as you want. We have 3 in the example below, but you can keep adding more links inside quotation marks and separated by a comma.

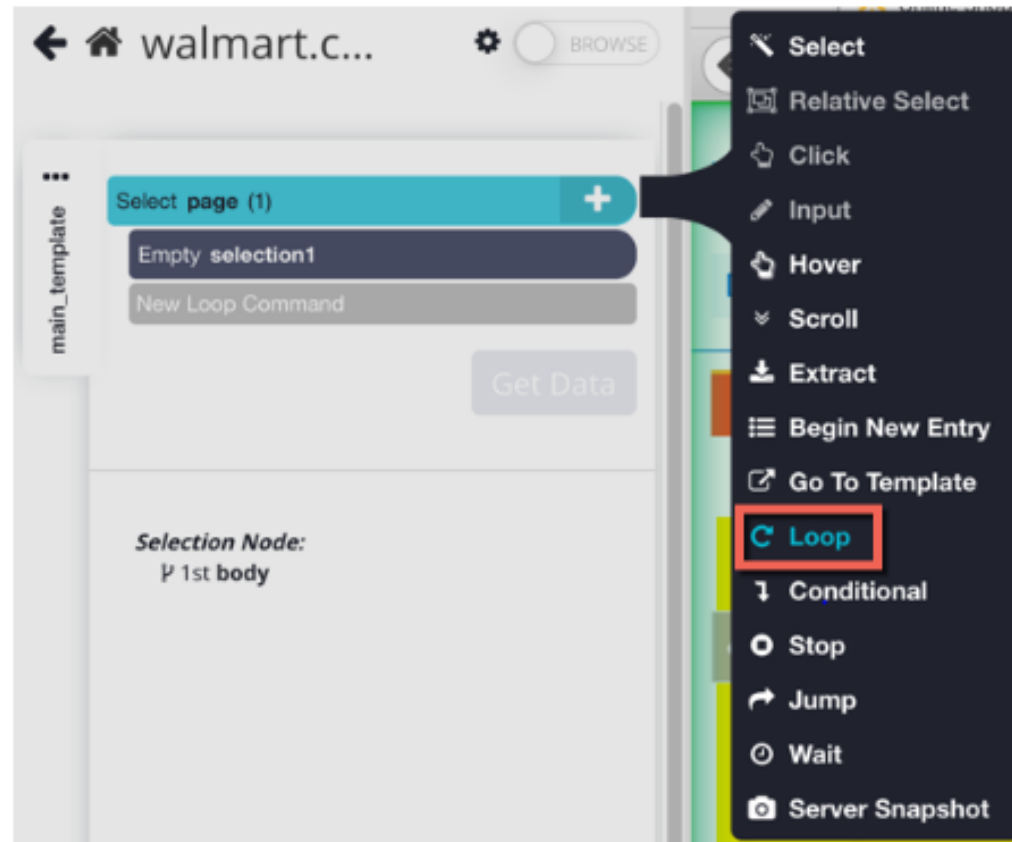

```
{  
  "urls": [  
    "https://www.walmart.ca/en/ip/hp-stream-14-cb110ca-14-inch-laptop-white-intel-celer",  
    "https://www.walmart.ca/en/ip/hp-17-by0002ca-173-laptop-natural-silver-and-ash-silv",  
    "https://www.walmart.ca/en/ip/acer-aspire-3-156-laptop-amd-e2-9000-amd-radeon-r2-gr",  
  ]  
}
```

Click on "Back to commands" to go back to the project view.

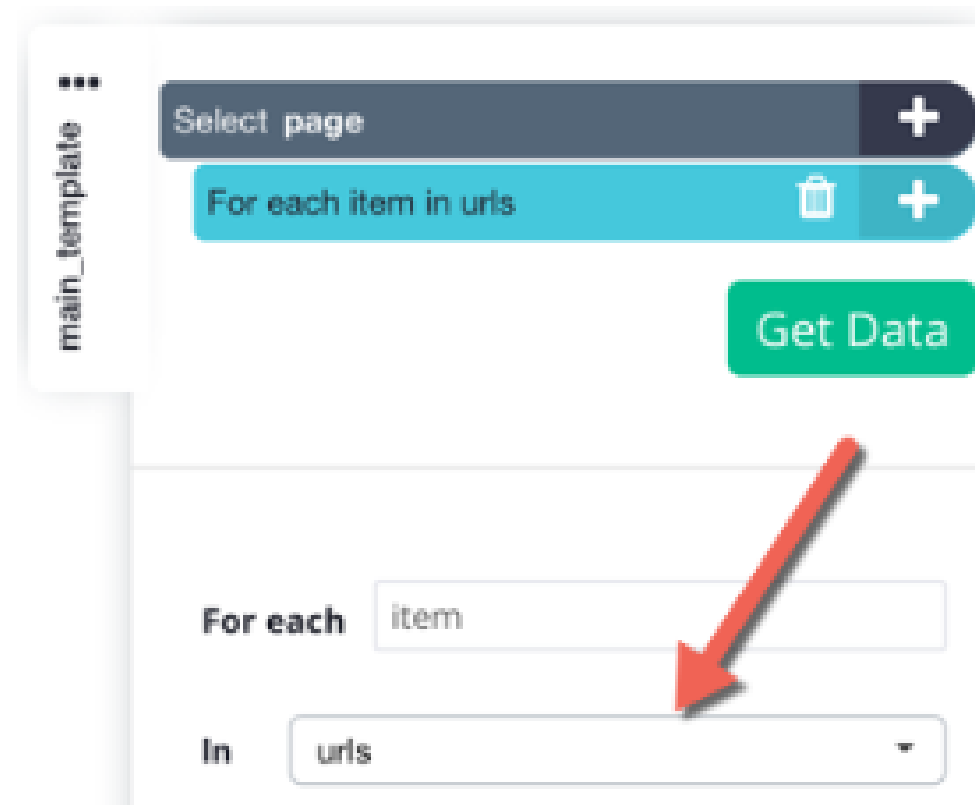

Click on the + button on the right side of the "Select page" command.

From the tool box, choose the "Loop" tool. It is inside "Advanced".

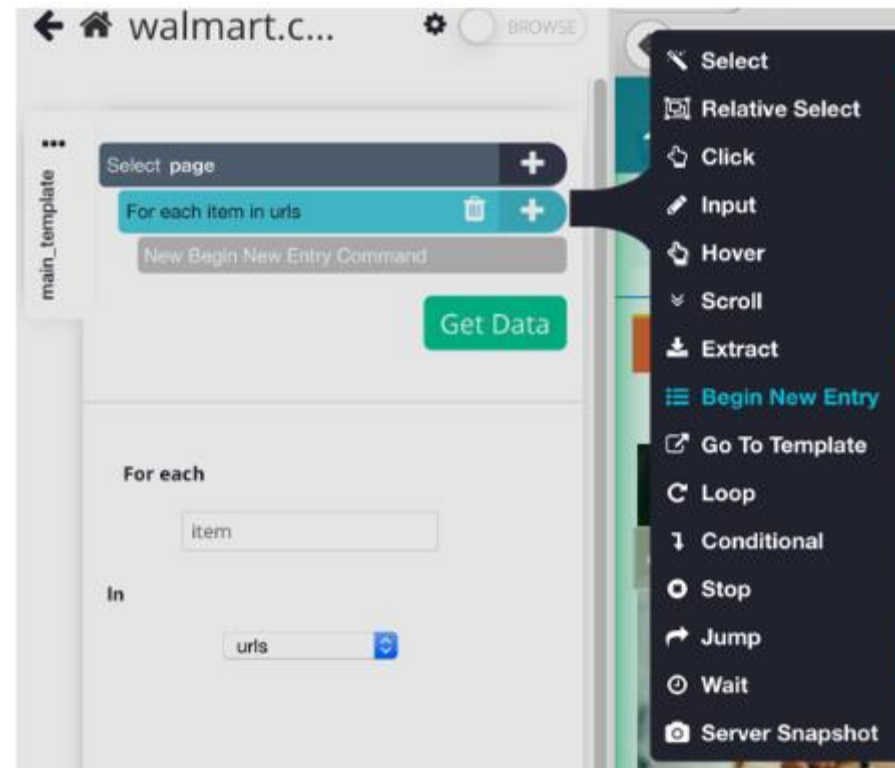

The loop tool iterates over a list. It is good for repeating commands multiple times.

When added, your Loop command should default to looping through your "urls" list.

Click on the + button on the right side of the "For each item in urls" command. From the tool box choose the "Begin New Entry" tool. Now the results of each one of the urls will go into a separate row in CSV and a separate object in JSON.

The screenshot shows a web scraping tool interface. On the left, a sidebar labeled "main_template" contains a menu icon. The main workspace displays a sequence of commands in a list:

- Select page
- For each item in urls
- Begin new entry in links
- Extract link

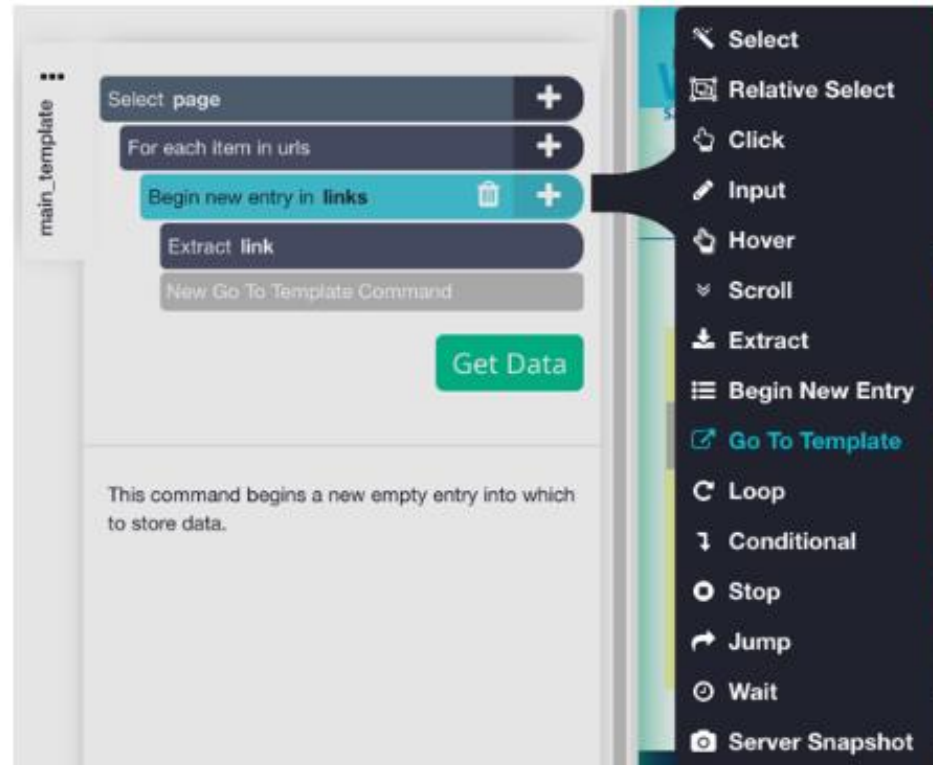

A red arrow points to the "Extract link" command. Below the list is a green "Get Data" button. Below the command list, there is a configuration panel for the "Extract" step:

- An "Extract" label followed by a dropdown menu.
- A text input field containing "item", with a red arrow pointing to it.
- A checkbox labeled "Use regex".
- A text input field containing "regex".
- A checkbox labeled "Extract all occurrences".

Rename the "list1" command to something else like "links". Make sure not to name the Begin new entry command the same as the list that holds your urls.

The begin new entry command should have a unique name.

Click on the + button on the right side of the "links" command and choose the "Go To Template" command from the tool box. The Go To Template command will let you specify which url you want to go to and which type of page you want to open.

On the pop up window, choose the "Go to URL" option instead of the "Stay on the Same Page" option.

In the text box type in "item" without quotation marks, assuming you didn't name it something else.

Go To Template

×

Make ParseHub start executing a template. You can either execute the template on the same page or go to a URL. URLs are expressions, so you can combine them out of multiple parts.

☐ Stay on the Same Page

☒ Go to URL:

☒ Go to Existing Template 

☐ Go to Template from Another Project

☐ Create New Template

Go to Existing Template

In the "Create New Template" text box type in the name of a new template you want to open for each link - such as "results".

Click on "Create New Template". You should now be taken to the first url in your JSON list and a new template should be created for you.

Go To Template

×

Make ParseHub start executing a template. You can either execute the template on the same page or go to a URL. URLs are expressions, so you can combine them out of multiple parts.

Create New Template

On this new template continue making commands that will be applied to each of the urls in your list in turn.

The screenshot displays a web scraping tool interface with a sidebar on the left and a main content area on the right.

Left Sidebar:

- Templates:** A list of templates with expandable options:
 - Select Page
 - Select & Extract name
 - Select & Extract price
 - Select & Extract rating (1)
- Get Data:** A green button to execute the template.
- Selection Mode:** A green button labeled "Text".
- 1 of 1:** A dropdown menu showing "All elements with class rating 3, 4".
- Wait up to:** A dropdown menu set to "60 seconds for elements to appear".

Main Content Area:

- URLs:** A list of URLs, with the first one highlighted: "8 GB DDR4, 1 Tb Hard Drive, Windows 10 Home, NX.GNVAA.019".
- Product Image:** A large image of an Acer laptop.
- Product Title:** "ACER Aspire 3 15.6" Laptop, AMD E2-9000, AMD Radeon R2 Graphics, 8 GB DDR4, 1 Tb Hard Drive, Windows 10 Home, NX.GNVAA.019".
- Specifications:** "8GB RAM, 1TB HDD, Windows 10".
- Brand:** "By ACER".
- Seller:** "Sold and shipped by Walmart".
- Rating:** A star rating system showing 3 stars and "> 3 Reviews".
- Quantity:** A dropdown menu set to "1".

Click on the + button on the right side of the “select page (1)” command.

The image shows a web browser window displaying a Tokopedia product page for 'Tas Sepatu Bola/Futsal Grade Ori'. The browser's address bar shows the URL: <https://www.tokopedia.com/distributorjerse/tas-sepatu-bolafutsal-grade-ori?trkid=f=Ca0000L000P0W0S0Sh,Co0Po0Fr0C>. The product page features a search bar, a category breadcrumb 'Sepatu Bola > Tas Sepatu Bola/Fut...', a product image of Adidas bags, a price of 'Rp 25.000', and a 'Beli' button. A side panel on the left contains a 'main_template' section with a 'Select page (1)' command and a '+' button. A tooltip menu is open over the '+' button, showing options: 'Select', 'Relative Select', and 'Click'. Below the 'main_template' section is a 'results' section with a 'Selection Node: 1st body' and a 'Get Data' button. At the bottom of the side panel, there is a 'urls' section with two URLs and a note: 'This a live preview. When you are ready to run your project, click Get Data.'
